

Exhibit 1

**IN THE UNITED STATES DISTRICT COURT
FOR THE EASTERN DISTRICT OF VIRGINIA
Alexandria Division**

MICROSOFT CORPORATION, a
Washington corporation,

Plaintiff,

v.

JOHN DOES 1-2, CONTROLLING A
COMPUTER NETWORK AND THEREBY
INJURING PLAINTIFF AND ITS
CUSTOMERS,

Defendants.

Civil Action No: 1:19-cv-01582 (LO/JFA)

**DECLARATION OF DAVID ANSEMI IN SUPPORT OF MICROSOFT'S MOTION
FOR DEFAULT JUDGMENT AND PERMANENT INJUNCTION**

I, David Anselmi, declare as follows:

1. I am a Principal Investigator in Microsoft Corporation's Digital Crimes Unit ("DCU") Malware & Cloud Crimes Team. I make this declaration in support of Microsoft's Application for An Emergency Temporary Restraining Order and Order To Show Cause Re Preliminary Injunction. I make this declaration of my own personal knowledge or on information and belief where indicated. If called as a witness, I could and would testify competently to the truth of the matters set forth herein.

2. On December 18, 2019, I submitted a declaration in support of Microsoft's Application for an *Ex Parte* Temporary Restraining Order and Order To Show Cause Re Preliminary Injunction ("TRO Application"). Dkt. No. 14. I incorporate the contents of that declaration here.

3. On December 18, 2019, the Court granted Microsoft's TRO Application. Based on the Court's Temporary Restraining Order, Microsoft was able to cut off communications

between computers and networks compromised by the Defendants and certain Internet domains used by Defendants as a command and control infrastructure. Thereafter, the Court granted a Preliminary Injunction order.

4. Microsoft's ongoing investigation into Thallium shows that the TRO was effective in protecting many victims targeted by Thallium. For example, since the execution of the TRO, Microsoft interrupted attacks on hundreds of victims targeted by Defendants.

A. Defendants Continue To Register And Use New Domains Which Are Used For Malicious Purposes And Cause Irreparable Harm To Microsoft And Its Customers

5. Defendants continue to attempt to recover from the loss of their command and control domains by registering and activating new domains for use in Thallium's command and control infrastructure. The evidence gathered further indicates that Defendants have used and are using those domains to launch fresh attacks on victim networks. These domains often deceptively use very general purpose terms associated with computers or online services, such as "login-confirm.work," "webmain.work," "sslserver.work," "intemet.work," "com-vps.work," and similar words. Further, as discussed in my earlier declaration, Defendants continue to misuse Microsoft's trademarks and brand names, either in domain names, in content on web pages or in malicious software, to make their domains seem legitimate. For example, in domains associated with online services, fake Microsoft login, account validation or password reset pages are presented as the content that appears. Thallium malware also leverages registry keys bearing the Microsoft and Windows trademarks. A full list of the new domains is attached as **Exhibit 1** in the section labeled "NEW DOMAINS TO BE ADDRESSED THROUGH PERMANENT INJUNCTION." Each of these domains is used only for malicious purposes of deceiving users into providing their account credentials or to install malicious software, all of which is directed at intruding into the accounts and computers of the victims and stealing their personal, confidential or sensitive information. Each of these domains at Exhibit 1 is wrongful for these reasons, and for the same reasons set forth in my prior declaration. Each of these domains causes and

threatens to cause harm to Microsoft and its users that cannot be quantified or undone if Defendants are permitted to continue to control them. These domains cause harm that interferes with Microsoft reputation and brand, and its relationships with its customers. The only way to mitigate the injury of these domains is to transfer them to the control of Microsoft, on the same terms as the prior orders, for the reasons set forth in my prior declaration.

B. Identification Of Thallium Domains

6. One of the basic questions faced by Microsoft's investigators in the course of their investigation into Thallium is determining whether or not a domain is actually associated with illegal activity being conducted by the Defendants. Fortunately, such a determination can be reliably made based upon what we know about Thallium and how they operate their criminal infrastructure.

7. First, the Defendants typically use a small set of distinctive malware, and this malware can be identified and distinguished from other types of malware based on several specific forensic factors. The specific types of malware known to be used by Defendants is listed in **Exhibit 1** to this Declaration in the section labeled "CRITERIA INDICATING THALLIUM DOMAINS." The presence of this distinctive malware therefore serves as a reliable indicator that Defendants are involved. In other words, if the malware used in a new attack matches the distinctive malware known to have been used by the Defendants in past attacks, it indicates that the actors behind the new attack are the Defendants. Further, in the future, if new malware variants or families are used by Thallium, Thallium may be identified based on the similarity of such new malware to previously used malware and previously used modes of deploying such malware.

8. Because Thallium malware is reasonably distinctive, domains that are used to deliver the Thallium malware to targeted victims and domains that are used to communicate with Thallium malware already installed on victim networks are strongly implicated as Thallium domains. For example, phishing e-mails that deliver Thallium malware in the form of

weaponized documents or other attachments may come from or contain links back to particular domains. Other phishing e-mails include links to domains that Defendants have set up in advance as websites designed to download Thallium malware to the user's computer and infect it. Once installed on a computer, Thallium malware is programmed to connect to and communicate with a particular set of domains after it successfully infects a victim network. In any of these cases, the Internet domains associated with the Thallium attack are strongly implicated as Thallium domains.

9. Second, Microsoft has identified patterns in the registration information provided by Defendants when registering the domains that they use in their illegal activities. The factors considered include information required to be submitted during the domain registration process and includes information such as: "name," e-mail address, address and phone number provided by the registrant, the hosting service designated, the name servers used, and the IP address associated with the domain. Basic registration information associated with Domains registered by Defendants in the past, including the more recent domains registered by Defendants, is included in Exhibit 1. If the registration information associated with a newly identified domain closely matches the pattern associated with domains registered by the Defendants in the past, it is a strong indicator that the Defendants are behind the registration of the new domain. Further, in the future, if new information is used by Defendants, but registration patterns are similar to previously used patterns, this too will permit Thallium domains to be reliably identified.

10. Third, Microsoft considers the specific tactics used during a new attack. For example, Thallium Defendants often send phishing e-mails to victims in which the e-mail purports to be a notification from Microsoft to the recipient regarding an unauthorized access to the recipients Microsoft account, and requesting that the recipient reset his or her account credentials. If the victim clicks on the embedded "Login," or "Validate Account" or "Reset Password" button, or similar links in the phishing e-mail, the victim will be connected to a Thallium-controlled website which will attempt to induce the victim to enter their account

credentials. Other tactics favored by the Thallium Defendants include particular deployments of remote code execution through browser drive-by, remote code execution through malicious attachment, privilege escalation or sandbox escape, security feature bypass, social engineering based attack and/or bootstrapped add-on. Where the tactics used in a new attack match the tactics observed to be favored by Thallium Defendants in past attacks, it is an indication that the Thallium Defendants are behind the new attack. Consequently, a domain can be linked to the Thallium Defendants by observing the tactics used in attacks involving that domain. Further, in the future, if the details, code and mode of execution change, but the general tactics are consistent with prior tactics of Thallium, this too will permit Thallium domains to be identified.

11. Fourth, the Thallium Defendants tend to target a particular type of victim and attempt to steal particular types of information. Therefore, Microsoft can use information about the intended victim to help determine whether or not Defendants are involved in the new attack. For example, Thallium continues to target organizations that work on Nuclear Proliferation issues, think tanks, university staff members, members of organizations that attempt to maintain world peace, and human rights organizations. Where an Internet domain is associated with an attack on these particular types of targets, it is a factor that is consistent with the known activity and objectives of the Defendants. Further, in the future, if the targeted individuals or institutions are consistent with prior tactics of Thallium, this too permits Thallium domains to be identified.

12. Microsoft considers many factors associated with a domain including those described above and listed in Exhibit 1 to make a balanced determination of whether or not a domain is being used by the Thallium Defendants.

13. Defendants continue to register domains to carry out attacks on Microsoft's technology and customers, in particular, using terms which are suggestive of Microsoft's services and use of Microsoft's trademarks, brands and other deceptive means, despite the court's previous orders to cease that activity and despite the prior relief which removed previously used domains from Defendants' control. For example, Defendants use such marks in

content presented on malicious websites, in domain names or in registry keys associated with their malware. Defendants use this technique to disguise the illegal nature of their conduct from the intended target.

14. Microsoft owns the registered trademarks or brands: “Access,” “Active Directory,” “ActiveX” “AppLocker,” “Authenticode,” “Azure,” “Bing,” “BitLocker,” “BizSpark,” “BizTalk,” “BlueTrack,” “BranchCache,” “CodeLens,” “Cortana,” “Delve,” “DeployR,” “DevelopR,” “Direct3D,” “DirectX,” “DistributedR,” “DreamSpark,” “Dynamics,” “Edge,” “Excel,” “Exchange,” “ExpressRoute,” “ForeFront,” “GroupMe,” “HDInsight,” “Healthvault,” “HoloLens,” “Hotmail,” “Hyper-V,” “InfoPath,” “InPrivate,” “IntelliMirror,” “IntelliSense,” “IntelliTrace,” “InterFlow,” “Internet Explorer,” “JScript,” “Kinect,” “LifeCam,” “LifeChat,” “LightSwitch,” “Live,” “Lumia,” “Lync,” “Microsoft,” “Minecraft,” “MSDN,” “MSFT,” “MS,” “MSN,” “MultiPoint,” “O365,” “Office,” “Office 365,” “OneDrive,” “OneNote,” “Outlook,” “OWA,” “Passport,” “PlayReady,” “PowerApps,” “Power BI,” “PowerPoint,” “PowerShell,” “Publisher,” “RemoteFX,” “ScaleR,” “SharePoint,” “Silverlight,” “Skype,” “SmartGlass,” “SmartScreen,” “SQL Server,” “StorScore,” “StorSimple,” “Surface,” “Sway,” “SwiftKey,” “SyncToy,” “U-SQL,” “Visio,” “Visual Basic,” “Visual C++,” “Visual C#,” “Visual F#,” “Visual J++,” “Visual J#,” “Visual Studio,” “Win,” “WebMatrix,” “Windows,” “Word,” “Xamarin,” “Xbox and Yammer,” used in connection with its services, software and products. There is a substantial risk that Defendants will attempt to make unauthorized use of these trademarks.

15. Given Defendants’ apparent willingness to violate the court’s orders on an ongoing basis, and the ease and speed with which Defendants can register Microsoft-related domains to continue their attacks, an ongoing process is needed to efficiently and quickly curtail such activities as soon as Defendants register domains for their attacks. Without such a process, Defendants will be able to continue their malicious and illegal activities, will continue to cause irreparable injury to Microsoft, its customers and the public. Without such a process, Defendants

will not be deterred from engaging in such illegal and harmful activities. I have reviewed the process set forth in the proposed supplemental injunction order submitted with this declaration. Based on my experience and background, I conclude as a technical and practical matter that the process set forth in the proposed order would enable Microsoft and the Court to effectively and efficiently enforce the Court's prior and ongoing orders and stop the irreparable harm caused by Defendants' illegal activities on an ongoing basis.

I declare under penalty of perjury under the laws of the United States of America that the foregoing is true and correct to the best of my knowledge.

Executed this 14 day of October, 2020, in Redmond, Washington.

A handwritten signature in cursive script, reading "David Anselmi", is positioned above a solid horizontal line.

David Anselmi

EXHIBIT 1**I. CRITERIA INDICATING THALLIUM DOMAINS****A. Technical Criteria Indicating Thallium Domains**

Delivers malicious software, code, commands, exploits, implants and/or “backdoor” functionality previously associated with Thallium, including but not limited to: BabyShark, KimJongRAT, PC RAT and Gh0st RAT, Cowboy Loader, Cowboy Converter malware, or similar code or functionality deployed in a manner previously associated with Thallium.	Associated with remote code execution through browser drive-by or malicious attachment, privilege escalation or sandbox escape, security feature bypass, social engineering based attack and/or bootstrapped add-on, escalation of privileges, DLL file backdoor, credential stealing functionality, SSL tunnel, and/or functionality to deliver code or functions to “air gapped” USB devices, deployed in a manner previously associated with Thallium or similar code or functionality.
Domain interaction with and similar observation of known Thallium infrastructure	Registration and domain name patterns
Structure of domain name, subdomain and/or file path previously associated with Thallium	Keywords or organization names previously associated with Thallium
Domain registration information previously associated with Thallium	Payment mechanisms and patterns previously associated with Thallium
Name servers	Start of Authority (SOA) records
Resolves to IP of past Thallium domain, malware, command and control server or similar infrastructure	Hosted content previously associated with Thallium
Used to deceive, target, obtain information from, and/or communicate commands or code to recipients, persons, institutions or networks previously targeted by Thallium.	Used to deceive, target, obtain information from, and/or communicate commands or code to recipients that may possess or be able to provide sensitive information or trade secrets of persons, entities or networks related to the defense, critical infrastructure or high technology sectors, think tanks, universities, journalists, political advisors or organizations, government bodies, diplomatic institutions, and/or military forces and installations.
